                                                                                                                                                                                                                                                                                                                                                                                                                            Submitted (199-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On May 9, 2003 this sequence version replaced gi:23270097.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Cells comprising a heterozogous merings of producting a comprising a heterozogous merings of producting a knockout mouse comprising a heterozogous disruption in a target DNA sequence (preferably gene T243) encoding a TRP and of producing a knockout mouse comprising a homozogous disruption in a gene encoding TRP, where the disruption inhibits the production of the wild type TRP. The invention also relates to identifying agents capable of affecting a phenotype of a knockout mouse. Also described are methods of determining whether expansion of the trinucleotide repeat in a gene encoding TRP produces a phenotypic change. The transgenic animals and the cells are useful for identifying compounds capable of ameliorating disease symptoms, and as test substrates for the identification of drugs, pharmaceuticals, therapies and interventions which may be effective in treating trinucleotide repeat disorders e.g. fraggle X syndrome and Huntington's disease. The animal models for trinucleotide repeat disorders are ideal model systems to study the progression of disease in vivo, the molecular basis of these diseases and show the features observed in human disease. Using the mice, it is possible to anodel both the pathogenic mechanism and the trinucleotide repeat instability in the mouse describes methods of producing embryonic stem (ES) trinucleotide repeat protein The present sequence encodes for (TRP). The invention describes me

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents the DNA sequence of an expanded T243

C gene. The T243 gene encodes for a trinuclectide repeat protein (TRP). The invention describes methods of producing embryonic steem (ES) cells comprising a heterozygous disruption in a target DNA sequence (preferably gene T243) encoding TRP, where the disruption in a gene encoding TRP, where the disruption in a gene encoding TRP. The invention also relates to identifying agents capable of affecting a phenotype of a knockout course. Also described are methods of determining whether expansion of the trinucleotide repeat in a gene encoding TRP produces a phenotypic change. The transgenic animals and the cells are useful for identifying compounds capable of ameliorating disease symptoms, and as test substrates for the identification of drugs, pharmaceuticals, therapies and interventions which may be effective in treating trinucleotide repeat disorders e.g. fragile X syndrome and Huntington's disease. The animal models for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               trinucleotide repeat disorders are ideal model systems to study the progression of disease in vivo, the molecular basis of these diseases and show the features observed in human disease. Using the mice, it is possible to model both the pathogenic mechanism and the trinucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel transgenic animals useful as animal model for characterization of function of a gene encoding trinucleotide repeat proteins (TRPs), contains heterozygous disruption in a gene encoding TRP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Score 1725.2; DB 4; Length 1848;

The present sequence encodes a protein involved in fibroblast growth factor (FGF) signal transduction. Such proteins are useful for analyzing the mechanism of formation of various organs, such as midbrain optic-tectum portion by a midbrain mesencephalon border, the mechanism of formation of cerebellum. mechanisms of formation of inner ear, blood vessels, limb buds, teeth, and canceration mechanisms of a cell.
                                                                                                                                                                                                                                                                                                                                                                    Novel gene encoding protein involved in fibroblast growth factor signal transduction, useful for analyzing mechanism of formation of organs such as midbrain optic-tectum portion, cerebellum, inner ear and canceration mechanism of cell.

The present invention relates to the isolation of human nuclear factor-
kappaB (NP-kappaB) associated polypeptides and polynucleotides. The NP-
kappaB associated polypeptide and polynucleotide sequences are useful for
preventing, treating or ameliorating various disorders including immune
cdisorders, inflammatory disorders, cancers, disorders relating to
aberrant apoptosis, hepatic disorders, Hodgkin's lymphomas,
cd Asematopoletic tumours, hyper-IgM syndromes, hypolidrotic ectodermal
dysplasia, x-linked anhidrotic ectodermal dysplasia, immunodeficiency,
cd papalasia, x-linked anhidrotic ectodermal dysplasia, immunodeficiency,
cminontinentia pigmenti, viral infections (e.g. those caused by human
cc incontinentia pigmenti, viral infections (e.g. those caused by human
cc immunodeficiency virus (HIV), human T-cell lymphotropic virus (HILV),
chepatitis B, hepatitis C, Epstein Barr virus (EBN), influenza),
crheumatoid arthritis, inflammatory bowel disease, colitis, asthma,
atherosclerosis, cachexia, euthyroid sick syndrome, stroke, experimental
atherosclerosis, cachexia, euthyroid sick syndrome, stroke, experimental
cc allergic encephalomyelitis (EAE), autoimmune disorders, infection, hyperproliferative disorders related to aberrant squal
cc responses, hypercongenital conditions, birth defects, necrotic lesions,
creanding cardivascular disorders, diseases of the panoreas
cc disorders (e.g. Huntington's chorea), Turner's syndrome, bacterial
cinfections, cardiovascular disorders, infertility, psoriasis and
chaemolytic anaemia. The present sequence represents a human NF-kappaB
cascoiated polymucleotide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                infertility; psoriagis; haemolytic anaemia; antiinflammatory; anti-HIV; cytostatic; hepatotropic; virucide; antirheumatic; antiarthritic; antiasthmatic; immunoomodulator; antidiabetic; antiallargic; neuroprotective; immunosuppressive; vulnerary; antibacterial; antiinfertility; antianaemic; antipsoriatic; cerebroprotective; cardiant; antiarteriosclerotic; gene; ss.

Claim 1; SEQ ID NO 139; 646pp; English.

The invention relates to an isolated nucleic acid molecule having

NrkappaB (nuclear factor kappa B) modulating activity (or its fragments,
variants, homologs and sequences hybridizing to it.) Also included are an
isolated polypeptide capable of modulating an NrkappaB response (or its

Comain, epitope, variant, species homolog or interacting protein), an
isolated antibody that binds specifically to the isolated polypeptide, a
method for preventing (retaring) or ameliorating) a medical condition, an
isolated antibody that binds specifically to the isolated polypeptide, a
method for diagnosing a NrkappaB associated condition (or a susceptibility

CC diagnosing a NrkappaB associated condition) (or a subject, a method for
identifying a binding partner to the polypeptide, a method for identifying
a compound that modulates the biological activity of a NrkappaB

CC f modulating the biological activity of a NrkappaB

CC condition, e.g. immune disorder, an inflammatory disorder related to

CC disorders Hodgkins lymphomas, hematopoietic tumors, hyperial bepatits CC

CHAPLY, HTW-1, hepptids B

CC disorders Hodgkins lymphomas, hematopoietic tumors, hyperial activity,

CC disorders, immunodeficiency, al inflammatory disorder related to hypohydrotic ectodermal dysplasia, and related to hypohydrotic ectodermal dysplasia, and related to hyperial activity, and evenion of immune eigenchers, incrotic lease

                                                                                                                                                                                                                                                                                                                         AAS21244-AAS21518 encode for novel human secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bioactive molecules to calls expressing PRO polypeptides, to adulate biological activities of cells expressing PRO polypeptides, and to detect the presence of mammalian lung, colon, polypeptide expression in a cell sample tumours by comparing PRO polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TMP-alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation or gene expression in pericyte cells, the release of proliferation cartilage, the proliferation of inner ear utricular supporting cells or of T-colliferation of inner ear utricular supporting cells or of T-colliferation of inner ear utricular supporting cells or of T-colliferation of solve and of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide to factor villa. The PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The probes, antiesness encoding PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The probes, antiesness encoding PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The probes, antiesness encoding PRO polypeptides can be used in assays to identify molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            406
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          466
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      586

```

```
The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for linking polypeptides are useful for detecting other PRO polypeptides, for linking biological activities of cells expressing PRO polypeptides, and for for identifying agonists or antagonists. The PRO polypeptides are useful for contentifying agonists or antagonists. The PRO polypeptides are useful for contentifying agonists or antagonists. The PRO polypeptides are useful for contentifying adouted the properties of tumour necrosis factor (TNF)-alpha from human blood, for stimulating the proliferation or differentiation of chondrocytes, and detecting the prosesce of tumours. The polymucleotide sequences encoding PRO polypeptides are useful as hybridisation probes, in chromosome and gene mapping, in the generation of antisense RNA and DNA, in the preparation of PRO polypeptides, for generating transgenic animals or knockout animals, for the generic analysis of individuals with encoding the human PRO polypeptides of the invention. Note: The sequence data for this patent was obtained in electronic format directly from the USPTO web site at sequence of useful an electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                              New secreted and transmembrane PRO nucleic acids, useful for gene therapy, in chromosome and gene mapping, as chromosome markers, in tissue typing, and in chromosome identification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             287 CGCGGGAGGAACCGCCCGGTCCTTTAGGCTCCGGGCCGGGCCGGGCCATGGATTCAA

The invention describes an isolated human PRO polypeptide. The PRO polypeptides are useful in detecting PRO polypeptides in a sample, in comparing a bioactive molecule to a cell expressing a PRO polypeptide, and in modulating at least one biological activity of a cell expressing a PRO polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus cuseful for treating cardiac insufficiency disorders. PRO154 and PRO186 stimulate adrenal cortical capillary endothelial growth, and PRO536, PRO439, PRO826, PRO439, PRO826, PRO439, PRO826, PRO439, PRO826, PRO439, PRO826, PRO1068 or PRO535, PRO826, PRO819, PRO1126, PRO439, PRO186 or PRO535, PRO6335, PRO826, PRO4397 induce c-foe in endothelial cells, and are thus useful for treating conditions or disorders where angiogenesis would be beneficial, e.g. wound healing and antagonist of this polypeptide are useful for treating concerous tumours. PRO812 inhibits vascular collocated in growth factor (VEGF) stimulated proliferation of endothelial growth factor (VEGF) stimulated proliferation of endothelial growth factor (VEGF) stimulated proliferation of endothelial cells and is thus useful for inhibiting endothelial cell growth in mamnas which would be beneficial in inhibiting tumour growth. PRO826, PRO1068, PRO1184, PRO1346 and PRO1375 stimulate proliferation of stimulated T-lymphocytes and are therapeutically useful for enhancing immune response. PRO826, PRO1068 or PRO1132 enhance survival proliferation of cretinal neurons cells (PRO1132 is also enhances survival/proliferation of decreased mesangial cell function such as Berger disease or other comphropathies associated with dermatitis, herpetiforms or other comphropathies associated with dermatitis, herpetiforms or other comphropathies associated with dermatitis, herpetiforms or control disease. PRO1100, PRO844, PRO1112, PRO1192 and PRO1137 induce the condises a novel human PRO PROFE in judices, and core in the proventing special processed mesangial cells injuries, and arthritis. This sequence Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone and/or cartilage disorders, e.g. arthritis. 3 Gao Deforge L, Desnoyers L, Filvaroff E, G A, Godowski PJ, Gurney AL, Sherwood S; Tumas D, Watanabe CK, Wood WI, Zhang Z;

```
The invention relates to an isolated nucleic acid comprising at least 80 sequence identity to a PRO (secreted and transmembrane protein) cDNA comprising a nucleic acid (a) encoding a PRO polypeptide, or its extracellular domain (with or without its associated signal peptide), which comprises any of the 275 120-850 residue amino acid sequences, given in the specification; (b) comprising any of the 275 300-3500 nucleotide sequences, given in the specification; or (c) comprising the full-length coding sequence of the nucleotide sequences given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO1114 PRO4978, useful in molecular biology, chromosome and gene mapping, generating antisense RNA and DNA, and in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 2; Fig 135; 659pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 2003-466355/44.

Culture Collection (ATCC) Accession Numbers listed in the specification also included are a vector comprising the novel nucleic acid, a host cell also included are a vector comprising the novel nucleic acid, a host cell also included are a vector comprising the novel nucleic acid, a host cell comprising the vector, producing a RPO polypeptide, the isolated RPO polypeptide of fused to a heterologous amino acid sequence, an anti-PRO polypeptide of fused to a heterologous amino acid sequence, an anti-PRO compressing a RPO polypeptide, including at least one biological activity of a cell expressing a RPO polypeptide, stimulating the release of tumnour necrosis factor-alpha (TNF-alpha) from human blood, (or proteoglycans from cartilage or cytokine from peripheral blood mononiciear cells (PBMC)), andipocyte cells of proliferation of or gene expression in pericyte cells, stimulating the proliferation of respective cells (or proliferation of or gene expression in pericyte cells (or of T-lymphocyte cells, or of endothelial cells), inhibiting the binding of A-peptide to factor VIIA, or differentiation of adipocyte cells (or of T-lymphocyte cells, or of atumour in a mammal and an oligonucleotide probe derived from any of the nucleotide sequences given in the specification. The polymucleotide is useful in molecular biology, in generating antisense RNA and DNA, and in gene therapy. The combinant techniques, and in generating either transgenic animals or recombinant techniques, and in generating either transgenic animals or recombinant techniques, and in generating either transgenic animals or responsive to the polympeptide or antibody, such as the propertice or antibody, such as the present of antibody, such as the present of an entipody, such as the present of antibody, such as the present cent antibody, such as and in preparing a medicament for treating a condition and and and an entipody is used in preparing a medicament for treating a condition and an angent and an antipode antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      346
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           646
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    406

New secreted and transmembrane nucleic acids and polypeptides, designated as PRO, useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, or cancer.

Claim 2; Fig 135; 659pp; English.

The invention relates to an isolated nucleic acid comprising, or which is at least 80% identical to, or the full-length coding sequence of, any of the 27% nucleotide sequences, encoding the corresponding PRO polypeptide (one of 27% secreted or transmembrane proteins). The nucleic acid further comprises the full-length coding sequence of the DNA deposited under american Type Culture Collection (ATCC) accession number in a list given in the specification. Also included are vectors and host cells for producing PRO proteins, and mature sequences, methods of detecting PRO extracellular domains and mature sequences, methods of detecting PRO proteins, methods for simulating the release of TNF-alpha (tumour contrace) factor alpha) from human blood, (and the proliferation of chondrocyte cells, the proliferation of contraction of confidences, methods of inner ear urticular supporting cells, the catriage, proliferation of finer ear urticular supporting cells, the catriage, proliferation of finer cells, the release or protecyly proliferation of conduction of inner ear urticular supporting cells, the catriage, proliferation of conduction of inner ear urticular supporting cells, the cells, a method for inhibiting the proliferation of proliferation of finer modulating the uptake of glucose or free cartiage, proliferation of cattor vills, or the differentiation of adprocyte cells, a method for modulating the uptake of glucose or free calls, a method for detecting the presence of a tumour in a mammal and olygomucleotide probe derived from any of the nucleic sequences cells, and polypeptides are useful for treating of the inventions of infammatory diseases, organ failure, atherosclerosis, cardiac injury, intendeficiency syndrome), cancer, or diabetic complications. The nucleic acids are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. Both cuestul in tissue typing. The present sequence encodes a PRO protein

Novel secreted and transmembrane polypeptide for modulating biological activity of cell expressing the polypeptide, identifying agonists or antagonists of polypeptide, and as molecular weight markers.

Claim 2; Fig 135; 659pp; English.

The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (1). (1) is useful for stimulating the cransmembrane) polypeptides (1). (1) is useful for stimulating the cransmean blood, for modulating the uptake of glucose or FRA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of inner are utricular supporting cells, for stimulating the proliferation of inner are utricular supporting cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of endothelial cells, for stimulating proliferation of endothelial cells, for stimulating proliferation of endothelial cells, for detecting cells, for stimulating proliferation of endothelial cells, for detecting the prosence of tumour in a mammal. The tumour is lung, colon, breast, prostate, rectal, cervical or liver tumour. The oligonucleotide probes are useful for isolating genomic and cDNA nucleotide sequences or antisense probes. (1) is also useful as therapeutic agent. RNO is useful in the corresponding in the corresponding of interaction of properties from mapping, in generation of antisense RNA and DNA, in the preparation of PRO polypeptide, for generating transgenic animals which in turn are useful in the development and concomme identification, as chromosome anaker, and for generating chromosome identification, as chromosome serum, and for generating chromosome identification, as chromosomes or serum, and for generating chromosome identification, as chromosomes or serum, and for generating to a constance of the present of the pre

| 8888 | affinity purificat: sources. (I) and (; a novel human secre | ion of PRO from recombinant cell culture or natural [11] are useful for tissue typing. This sequence encodes eted and transmembrane PRO polypeptide. |

WPI; 2003-687639/65. P-PSDB; ADA76086 New isolated nucleic acid encoding a secreted and transmembrane polypeptide, designated e.g. PRO1114 or PRO4978, useful in chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy.

Claim 2; Fig 135; 659pp; English

```
The invention relates to alorated human PKU polypeptides lescreted and transmembrane polypeptides an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for catering the proliferation or differentiation of chondrocyte cells and a method for catering the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polypuroleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polyprocides may also actisense RNA and DNA and in gene therapy. The polyprocides may also be used in preparing PRO polypeptides by recombinant techniques and in capenating at the development and screening of therapeutically useful and the development and screening of therapeutically useful and medicament for treating a condition responsive to the polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of or gene expression in periove cells, for remulating differentiation of adipocyte cells, for stimulating checked or stricular cartial of sendentels cells or adipocyte cells, for inducing endothelial cell tube formation and for treating checked proliferation of inner ear utricular supporting cells or T-lymphocyte cells, for inducing endothelial cell to repeace and proceed proliferation of associated sporter related joint problems, arthritis. PRO polypeptides which stimulate the release of proteoglycans from arthritis. PRO polypeptides which stimulate such as various mammalian haemoglobin-cells may benefit from enhanced local immune system cell infiltration. This sequence represents
invention relates to isolated human PRO polypeptides (secreted and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               from USPTO at segdata.uspto.gov/sequence.html.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the problemation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. lung, colon, breast, prostate, rectal, cervical and liver tumours). The polynucleotides are consected in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating suese RNA and DNA and in chromosome and gene mapping, in generating suesting PRO colon, propertides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the coloppeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing a medicament for crating a condition responsive to the polypeptides or antibodies are used in preparing a medicament for as tumours, for modulating the uptake of glucose or PRA by adipocyte cells, for stimulating the proliferation of inner ear urricular cartilage, for stimulating the proliferation of cygne expression in pericyte cells, for stimulating the release of proteoglycans from PROC cells, for stimulating the release of cycchines from PROC cells, for stimulating the proliferation of inner ear urricular continibiting the differentiation of adipocyte cells and for stimulating the proliferation of supporting the proliferation of supporting a human PRO proliferation of endothelial cells. This sequence represents a human PRO polymucleotide of the invention. Note: The sequence data for this patent consideration of construction of construction of the propertion of the propertion of the propertion of t

New PRO nucleic acid and encode polypeptides, are useful for manufacturing a medicament for diagnosing or treating cancer

Claim 2; Fig 135; 660pp; English.

The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (I). (I) is useful for stimulating the release of TNF-alpha from human blood, for modulating the uptake of glucose or FFA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of or gene expression in pericyte to mulating the proliferation of Inner ear utricular supporting cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating cells, for stimulating proliferation of endothalial cells, for stimulating proliferation of endothalial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, prostate, rectal, cervical or liver tumour is lung, colon, breast, prostate, rectal, cervical or liver tumour is lung, colon, breast, constants probes are useful for isolating genomic and cDNA nucleotide sequences or antisense probes. (I) is also useful as therapeutic agent. PRO is useful in an assays to identify other proteins or molecules involved in binding interaction. A polynucleotide (II) encoding (I) is useful in chromosome and gene mapping, in generation of antisense RNA and DNA, in the preparation of PRO polypeptide, for generating transgenic animals or reparation of animals or recompany.

knockout animals which in turn are useful in the development and screening of therapeutically useful reagents, in gene therapy, for chromosome identification, as chromosome marker, and for generating probes. An anti-(I)-antibody is useful in diagnostic assays for PRO, e.g. detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. (I) and (II) are useful for tissue typing. This sequence encodes
